

Sprint 1 - MVP	Sprint 2 - Develop the technical functionality	Sprint 3 - Consider the user	Sprint 4 - Finished product
As a user I would like to be able to sign in with Dropbox to avoid creating a specific Bruse-account.	As a user I want to add tags to my files to keep them in order.	As a user I want to add tags to my files to keep them in order.	As a user I would like to choose where I store my files to make it fit my desires.
As a user I want to add files and folders from an external service to have them in the same place.	As a user I would like to edit tags for files in order to take care of changes or wrong information.	As a user I would like to edit tags for files in order to take care of changes or wrong information.	As a user I would like to be able to view my files in the browser to access them in a simple way.
As a user I want to add tags to my files to keep them in order.	As a user I would like to find objects by searching for key words to retrieve them efficiently.	As a user I would like to find objects by searching for key words to retrieve them efficiently.	As a user I want to be able to setup the system on my server locally as well as have the option to use Dropbox or Drive for flexibility.
As a user I would like to edit tags for files in order to take care of changes or wrong information.	As a user I would like to be able to search for my files to make it easy to find them.	As a user I would like to connect my Google Drive account (the same way as Dropbox) to store files at no cost.	As a user I would like an intuitive user interface to enhance my user experience.
As a user I would like to find objects by searching for key words to retrieve them efficiently.	As a user I want to download my files to have them locally.	As a user I would like to be able to create an account for getting access to the system without external services.	As a developer I would like to remove unused tags from the database to keep the database nice and clean.
As a user I would like to be able to search for my files to make it easy to find them.	As a user I want to add files from Dropbox to have them in the same place.	As a user I would like to be able to view my search results sorted by a combination of tags and filetypes.	As a user I would like to drag and drop links to the system for easy access.
As a user I want to download my files to have them locally.	As a user I would like to connect my Google Drive account (the same way as Dropbox) to store files at no cost.	As a user I would like to view my search results in a manner that is easy to understand to make my searches more efficient.	
	As a developer I would like to make the system more modular to make adding new services (Dropbox, Drive...) possible.	As a user I would like to choose where I store my files to make it fit my desires.	
	As a user I would like to be able to view my search results sorted by a combination of tags and filetypes.	As a user I would like to drag and drop files to the system for easy access.	
	As a user I want to store files locally on the server so that there are no file limit and no cost.	As a developer I would like to create a better user flow for the system to create a better experience.	
	As a user I would like to be able to create an account for getting access to the system without external services.
